What is DTS HD Master Audio Suite V2 and why you need it?

DTS HD Master Audio Suite V2 is a set of software tools that allows you to create, encode, edit and play back high-quality audio streams in the DTS and DTS-HD formats. Whether you are working on digital cinema, Blu-ray, DVD or streaming media, DTS HD Master Audio Suite V2 can help you deliver immersive, interactive and object-based soundscapes for your audiences.

What are the features of DTS HD Master Audio Suite V2?

DTS HD Master Audio Suite V2 consists of three components: DTS Encoder, DTS StreamTools and DTS StreamPlayer.

- **DTS Encoder** is a stand-alone application that allows you to create DTS and DTS-HD bitstreams from various input formats, such as WAV, AIFF, BWF and MDA. You can choose from different encoding options, such as DTS-HD Master Audio, which employs lossless compression to preserve the original audio quality; DTS-HD High Resolution Audio, which offers up to 7.1 surround sound with sample rates up to 96 kHz; or DTS Core Stream, which offers 5.1 surround sound with sample rates up to 48 kHz. You can also edit your bitstreams without re-encoding using the DTS Bitstream Tools.
- **DTS StreamTools** is a collection of plug-ins and stand-alone applications that allow you to work with MDA files. MDA is a flexible and scalable format that enables object-based audio production. You can use MDA Tools to create, mix, edit and export MDA files in your existing workflow and professional environments.
- **DTS StreamPlayer** is a professional software player that allows you to QC your DTS and DTS-HD encoded audio against video. It supports playback of all DTS, DTS-HD, DTS Express, DTS Digital Surround and AAC-LC audio stream types, as well as AVC and HEVC video at up to 4K resolutions. You can also monitor downmixes and metadata using the DTS StreamPlayer.

What are the benefits of using DTS HD Master Audio Suite V2?

By using DTS HD Master Audio Suite V2, you can enjoy the following benefits:

- **World-class quality:** DTS and DTS-HD are widely recognized as the leading audio formats for delivering high-quality sound for cinema and home entertainment. With DTS HD Master Audio Suite V2, you can create audio streams that match or exceed the original studio output.
- **Backwards compatibility:** DTS and DTS-HD are designed to be compatible with legacy decoders and devices. The Core Stream can be played back on any DTS-compatible system, while the extensions can be decoded by newer systems that support them. This ensures that your content can reach a wide range of audiences without compromising quality.
- **Creative freedom:** With MDA Tools, you can create immersive and interactive soundscapes using object-based audio. You can place sounds anywhere in the 3D space and control their movement and behavior. You can also add metadata to your audio streams to enable dynamic rendering and personalization by the end user.

How can you get started with DTS HD Master Audio Suite V2?

If you are interested in using DTS HD Master Audio Suite V2 for your audio production needs, you can purchase it through Westlake Pro^[1] or other authorized resellers. You can also visit the official website of DTS^[2] for more information about their products and services.
