Nokia 2690 RM-635: A Feature Phone with Latest Firmware Update

The Nokia 2690 is a feature phone that was released in 2010. It has a 1.8-inch TFT display, a VGA camera, a microSDHC card slot, Bluetooth 2.0, a stereo FM radio, and a removable Li-Ion 860 mAh battery. The phone supports GSM 2G bands and has a mini-SIM slot. The phone runs on Nokia's Series 40 operating system, which allows users to access basic applications such as SMS, MMS, email, web browser, games, and Java. The phone also has an MP3 player and a video player that can play MP4 and H.263 files. The phone has a phonebook capacity of 2000 entries and can store up to 20 dialed, received, and missed calls. The Nokia 2690 RM-635 is the specific model number for some regions. The RM-635 refers to the firmware version that is installed on the phone. The latest firmware update for the Nokia 2690 RM-635 is v10.65, which was released in February 2011. The firmware update improves the performance and stability of the phone and fixes some bugs. The firmware update can be downloaded from the official Nokia website or from various online sources. The Nokia 2690 RM-635 is a simple and affordable feature phone that offers basic functionality and connectivity. It is suitable for users who do not need advanced features or applications. The latest firmware update v10.65 enhances the user experience and ensures that the phone runs smoothly. If you want to update your Nokia 2690 RM-635 to v10.65, you will need a USB cable, a computer, and the Nokia Software Updater application. You can download the Nokia Software Updater from the official Nokia website or from other online sources. Before you start the update process, make sure that you backup your data and fully charge your battery. You should also remove the memory card from your phone to avoid any data loss or corruption. To update your Nokia 2690 RM-635 to v10.65, follow these steps:

1. Connect your phone to your computer using the USB cable.
2. Launch the Nokia Software Updater application on your computer.
3. Select your phone model and click on Next.
4. The application will check for the latest firmware version available for your phone. If v10.65 is available, click on Update.
5. The application will download and install the firmware update on your phone. Do not disconnect your phone or use it during the update process.
6. When the update is completed, the application will notify you. You can then disconnect your phone and restart it.

Congratulations! You have successfully updated your Nokia 2690 RM-635 to v10.65. You can now enjoy the improved performance and stability of your phone. You can also check the firmware version on your phone by typing *#0000# on the keypad. In conclusion, the Nokia 2690 RM-635 is a feature phone that offers basic functionality and connectivity. It has a 1.8-inch TFT display, a VGA camera, a microSDHC card slot, Bluetooth 2.0, a stereo FM radio, and a removable Li-Ion 860 mAh battery. It runs on Nokia's Series 40 operating system and supports GSM 2G bands. The latest firmware update for the Nokia 2690 RM-635 is v10.65, which improves the performance and stability of the phone and fixes some bugs. The firmware update can be downloaded and installed using the Nokia Software Updater application. The Nokia 2690 RM-635 is a simple and affordable feature phone that is suitable for users who do not need advanced features or applications.
