When you encounter a file like this, it is the repaired RAR file you want. Offline repair mode. Setup redistributable files that are required for repair are copied from a network share or folder path that is specified by the `"/addsource"` flag. This should generally be used when the tool is functioning in a disconnected or locked down environment. Optionally, sets the desired folder path for the logs file cabinet (FixDotNet\*.cab) generated by the tool. Default (that is not specifying this option) location of the CAB file is current user's desktop folder. The .NET Framework Repair Tool provides an option to repair the versions of .NET Framework that are installed on the computer (step 3 of the process in the "Repair Tool options" section). The tool requires the redistributable files of those versions to be available at the time of repair. By default, the tool downloads these packages from the internet during the repair. If your computer has limited or no internet connectivity, you should use Offline mode for the repair. To do this, specify the `/addsource` option together with the path of the folder that contains the redistributable files, as in the following example: `NetfxRepairTool.exe /addsource \\SHARE_PC\SHARE_FOLDER` If the Repair Tool does not find the required redistributable in the specified folder, it will try to download the file from the internet. The Repair Tool cannot do this if the required file cannot be downloaded. The following table lists the .NET Framework redistributable files. **Step 3:** You will see two options in the new window: **Check only** and **Check & fix detected errors**. Select the **Check & fix detected errors** option. After that, click on the **Start** button. Immediately after clicking **Start**, MiniTool Partition Wizard will check and repair the file system. **Step 2:** Select the corrupted zip file and click on the **Repair** icon. Alternatively, double-click on the corrupt RAR file to open it, then click on **Tools** on the menu bar and select the **Repair archive** option. **Step 5:** Click on the **Close** button to close the window, and then go to the folder containing the edited archive. It will be named `rebuilt.filename.rar` or `rebuilt.filename.zip`. If you unzip the file in an unauthorized directory, such as the **AppData** folder of the C drive, the unzip application may not be able to read and execute it. So, move the file to your desktop or other hard drive and extract it to fix the archive is either in unknown or damaged error.
