# Hitman Absolution Update 1.0.447.12: What's New and How to Get It

Hitman Absolution is a stealth action game that follows the original assassin Agent 47 as he seeks redemption in a corrupt and twisted world. The game was released in 2012 by IO Interactive and Square Enix, and received positive reviews from critics and players alike. However, like any other game, Hitman Absolution had some issues and bugs that needed to be fixed. That's why the developers released a series of patches and updates to improve the game's performance, stability, and features. One of these updates was version 1.0.447.12, which was made available for PC players on Steam in November 2012. So what did this update do? According to the official patch notes<sup>[1]</sup>, this update addressed the following improvements:

- Players using the Russian language will no longer crash as soon as they use the sniper rifle.
- Various issues that have been seen on specific configurations that caused the game to not be able to start up at all have been addressed.
- Problems with the Sniper Challenge Unlocks not carrying over into Hitman: Absolution have been addressed. On first starting the patched game you will receive your unlocks.
- Problems with negative level-scores have been fixed. Newly accomplished positive scores will be needed to erase your incorrectly remembered negative scores.
- A problem with keyboard and mouse controls where users would accidentally melee attack a person next to them when they intended to throw an item has been addressed.
- Legal and Intro movies can now be skipped immediately on startup after the game, on all launches but the very first on a machine.
- DirectX 10 hardware can now enable the simplest version of the Depth Of Field effect.
- Problems with audio occasionally being muted after ALT-TAB have been fixed.
- Various localization fixes.
- Miscellaneous other stability and general improvements based on crashes we have seen coming in.

The developers also noted that this was just their first set of fixes, and that they were continuing to monitor things and expect to provide further patches in the future. To get this update, PC players simply had to start up the game, and Steam would automatically update them to the latest version. The update was free of charge and did not require any additional downloads or keys<sup>[2]</sup>. However, some players reported that they had to verify their game files or reinstall the game to make the update work properly. Hitman Absolution Update 1.0.447.12 was a welcome improvement for many PC players who enjoyed the game's cinematic story, distinctive art direction, and highly original game and sound design. It also showed that the developers cared about their fans and were committed to delivering a quality product. If you are interested in playing Hitman Absolution, you can buy it on Steam for \$19.99. You can also check out the other games in the Hitman franchise, such as Hitman: Blood Money, Hitman: Contracts, and the latest Hitman 3. The Hitman games are known for their freedom of choice, living and breathing worlds, disguises, and instinct mode. As Agent 47, you can stalk your prey, fight them head on, or adapt as you go along. You can also use your environment, weapons, and tools to create your own unique assassinations. Hitman Absolution is a game that will challenge your skills, creativity, and morality as an assassin. Whether you prefer to be silent, violent, or somewhere in between, you will find plenty of opportunities to test your abilities and have fun. Just remember: the world is your weapon.
