How to Cut and Edit Videos with Tuneskit Video Cutter 1.0.3

If you are looking for a simple and powerful video cutter software that can trim and edit videos without quality loss, you may want to try Tuneskit Video Cutter 1.0.3. This is an all-in-one video cutting solution that supports various video and audio formats, such as MP4, MPEG, AVI, FLV, MP3, WMA, M4R, etc. In this article, we will show you how to use Tuneskit Video Cutter 1.0.3 to cut and edit videos easily and quickly.

Step 1: Download and Install Tuneskit Video Cutter 1.0.3

The first thing you need to do is to download and install Tuneskit Video Cutter 1.0.3 on your computer. You can get it from the official website[^1] or from other reliable sources[^2] [^3]. The installation process is very simple and fast. Just follow the instructions on the screen and you will be ready to use the software in minutes.

Step 2: Import Video or Audio into Tuneskit Video Cutter 1.0.3

After launching Tuneskit Video Cutter 1.0.3, you will see a user-friendly interface with a big "+" button in the center. Click on it to import the video or audio file that you want to cut. You can also drag and drop the file into the software directly. Tuneskit Video Cutter 1.0.3 supports batch cutting, so you can add multiple files at once if you want.

Step 3: Select the Segment that You Want to Cut

Once you have imported the file, you will see a timeline with a slider bar at the bottom of the interface. You can use the slider bar to select the segment that you want to cut by setting the start time and end time. You can also input the exact time manually in the boxes above the timeline. You can preview the selected segment in real-time with the built-in media player on the right side of the interface.

Step 4: Edit the Cut Segment (Optional)

If you want to edit the cut segment further, you can click on the "edit" icon next to each segment on the timeline. This will open a new window where you can crop, trim, add subtitles, watermarks, special effects and more to the segment. You can also adjust the brightness, contrast, saturation, hue and volume of the segment according to your preference.

Step 5: Choose Output Format and Destination Folder

After editing the segment, you can choose the output format and destination folder for it by clicking on the "Format" button at the bottom right corner of the interface. Tuneskit Video Cutter 1.0.3 provides a wide range of preset profiles for popular portable devices and media players, such as Apple gadgets, Samsung Galaxy, game consoles, smart TVs, etc. You can also customize the output parameters like codec, resolution, bit rate, frame rate, etc.

Step 6: Start Cutting and Saving the Segment

When everything is set up, you can click on the "Start" button at the bottom right corner of the interface to start cutting and saving the segment. Tuneskit Video Cutter 1.0.3 works at up to 60X faster speed without any quality loss. You can check the progress bar on the interface or minimize it to run in background mode.

Step 7: Merge Cut Segments into One File (Optional)

If you want to merge different segments cut from the same source file into a new file, you can check the "Merge Segments" option before clicking on the "Start" button. This will combine all the segments into one file with 100% original quality preserved.

Conclusion

Tuneskit Video Cutter 1.0.3 is a versatile and easy-to-use video cutter software that can help you cut and edit videos without quality loss. It supports various video and audio formats and provides flexible editing options
