# How to Install Artcam Pro 9 on Windows 7

Artcam Pro 9 is a software for designing and creating 3D reliefs and models. It is widely used by artists, woodworkers, and CNC machine operators. Artcam Pro 9 can work with both raster and vector graphics, and supports various formats such as BMP, JPG, TIFF, EPS, AI, DXF, and STL. In this article, we will show you how to install Artcam Pro 9 on Windows 7.

## Step 1: Download Artcam Pro 9

You can download Artcam Pro 9 from the official website of Designs4CNC[<sup>1</sup>], which offers a free trial version for 30 days. You can also purchase the full version of Artcam Pro 9 from the same website. The download file is about 1.2 GB in size, so make sure you have enough space on your hard drive and a stable internet connection.

## Step 2: Extract the downloaded file

After downloading the file, you need to extract it using a software such as WinRAR or 7-Zip. You will get a folder named "ArtCAM Pro 9.1". Open the folder and double-click on the file "setup.exe" to start the installation process.

## Step 3: Follow the installation wizard

The installation wizard will guide you through the steps of installing Artcam Pro 9 on your computer. You need to accept the license agreement, choose the destination folder, select the components to install, and enter the serial number if you have purchased the full version. The installation may take several minutes depending on your system configuration.

## Step 4: Restart your computer

After the installation is completed, you need to restart your computer to apply the changes. You can then launch Artcam Pro 9 from the Start menu or the desktop shortcut. You will see a start screen with the main tabs and options. You can create a new project or open an existing one from here.

## Step 5: Enjoy Artcam Pro 9

You can now use Artcam Pro 9 to design and create your own 3D reliefs and models. You can use various tools such as 3D sculpting, 3D painting, and 3D machining to achieve your desired results. You can also import and export files in different formats and generate a control program for your CNC machine.

We hope this article was helpful for you to install Artcam Pro 9 on Windows 7. If you have any questions or problems, please feel free to contact us or visit our website for more information.

## How to Use Artcam Pro 9 for Wood Carving

Artcam Pro 9 is a software that can help you create stunning wood carving designs and projects. You can use Artcam Pro 9 to design your own 3D reliefs and models, or import existing ones from other sources. You can also use Artcam Pro 9 to generate a control program for your CNC machine, which will carve your design on a wood material. In this article, we will show you how to use Artcam Pro 9

for wood carving.

## **Step 1: Create or import your design**

You can create your own design in Artcam Pro 9 using the tools in the toolbar and the project panel. You can draw shapes, curves, text, and vectors, and then convert them into 3D reliefs using the shape editor. You can also sculpt and paint your 3D reliefs using the sculpting and painting tools. Alternatively, you can import an existing design from a file or a photo. You can use the import wizard to select the file format, the resolution, and the size of your design. You can also use the bitmap to vector tool to convert a raster image into a vector image.

## **Step 2: Adjust your design**

Once you have your design in Artcam Pro 9, you can adjust it according to your preferences and needs. You can use the transform tools to move, rotate, scale, and mirror your design. You can also use the clipart library to add more elements to your design, such as borders, patterns, textures, and symbols. You can also use the relief layers to organize your design into different parts and levels. You can edit each layer individually or merge them together using the combine modes.

## **Step 3: Generate your toolpaths**

After you have finished your design, you need to generate the toolpaths that will instruct your CNC machine how to carve your design on a wood material. You can use the toolpath panel to select the type of toolpath you want to create, such as roughing, finishing, v-carving, drilling, or cutting. You can also select the tool type, size, speed, feed rate, and depth of cut for each toolpath. You can preview each toolpath in 2D or 3D mode and check for any errors or collisions. You can also simulate the carving process and see how your design will look like on a wood material.

## **Step 4: Save and export your toolpaths**

Once you have generated all the toolpaths for your design, you need to save and export them to a file format that your CNC machine can read. You can use the save toolpaths dialog box to select the output format, such as G-code, HPGL, or DXF. You can also select the post processor that matches your CNC machine model and configuration. You can then save your toolpaths to a folder on your computer or a removable device such as a USB flash drive.

## **Step 5: Carve your design on wood**

You can now use your CNC machine to carve your design on a wood material. You need to load your toolpaths file into your CNC machine controller and set up the parameters such as origin point, spindle speed, and coolant. You also need to secure your wood material on the machine table and make sure it is aligned with the origin point. You can then start the carving process and watch as your CNC machine transforms your design into a beautiful wood carving.

We hope this article was helpful for you to use Artcam Pro 9 for wood carving. If you have any questions or problems, please feel free to contact us or visit our website for more information.
